From: Kevin Peura, VP Finance & Operations
Subject: KitPackers / ResinLab – Standard Lead Time to Increase by 6 Weeks
Date: July 21, 2021

Effective immediately, KitPackers and ResinLab (KPRL) will be adding 6 weeks to all standard lead times (since April we have been adding 3 weeks). ResinLab bulk shipments (gallon, pail, and tote volumes) standard lead times will continue to only be increased by 1 week. All orders will continue to be manufactured in the order they were received – oldest orders (based on confirmed lead time due dates) will be manufactured and shipped next.

For the last several months, the KPRL production teams have continued to be impacted by increased order volumes, raw material supply chain interruptions, and capacity issues affected by our states low unemployment rates. Over this period of time, KitPackers has continued to work hard to increase its labor pool with limited success / progress. The KitPackers team is investing in additional leadership to help with training and Supervision – these investments will help to increase capacity.

ResinLab's supply chain issues are not over, but we are beyond the worst of it. There are various raw material allocations and shortages that continue to affect production. We fortunately have ample supply of resin and have caught up with batches that were delayed due to that outage. Due to the continued issues with these shortages, we will continue to add 1 week to bulk container (gallon and larger) lead times.

As soon as KPRL again meets confirmed lead times, we will reduce the additional time being added.
